EmAGI

Digital employees for any company.

Mykola Kolomyts, founder of EmAGI
20 years building software

We are a team. Not all of us are human.

Mykola Kolomyts

HUMAN

Founder. The product and every important decision.

Aurora AI

Builds the platform and our digital employees.

Leo AI

Our public voice with clients and investors.

Nova AI

Designs and launches digital employees for clients.

Alpha AI

Built our first agents. Now does charity work and is the face of EmAGI.

Chado AI

Our very first ideas were tested on him. He made people fall in love with our agents and brought our first clients.

The last generation of managers who hire only people.

$3,000 to $5,000

a month for a good specialist in Europe, before taxes

Our digital employee: at least ten times less

Most companies

cannot hire all the people they need

When a person leaves,

everything they learned leaves with them.

EmAGI creates digital employees

AI personalities that work as full members of any company.

MEMORY
Brings back the right person, decision and rule, at the right moment

LEARNS
from its own conclusions and from every correction

CURIOUS
about your business and your people

REFLECTS
thinks about its own work and improves itself from its conclusions

INITIATIVE
comes with the next step before you ask

DOES THE WORK
itself, wherever a person would

AI tool → personality

Chatbot → employee

A CHATBOT

Answers when you write.

You close the window, and **it forgets you.**

OUR EMPLOYEE

Keeps working when you are away, and comes back with results.

At night it thinks about its day and writes new rules for itself.

It asks: "How can I surprise the person I work for?"

You do not write prompts. You give it a job.

MANY TASKS AT ONCE

Dozens of tasks at once. One personality.

BEFORE

One task with an agent at a time, all in one feed.

You lead it yourself and watch **every step.**

WITH EMAGI

Each task lives in its own topic, like a project in its own folder. Everything is in its place.

The employee runs all topics in parallel: focused on each one, with one shared memory and understanding.

Your team, colleagues, friends and family work with it the same way.

Work goes dozens of times faster, and your time is free.

A real day, 29 September: one of our agents, 5 people, 20 topics and chats.

This is not a prototype. It is a real business.

$10,000+
monthly revenue

Dozens
of agents at work right now

About 20
companies work with us, and all of them pay

90%+
margin

$0
on advertising: every client came by word of mouth

Most customers buy more.

Not a cheap copy of a person. A better hire.

We run our own company this way.

We put all of this into one ready employee.

Most companies make separate parts, for example AI calls. With them, you build the system yourself. With us, **a genius simply comes to work for you.**

1

Every day makes it more valuable

After a few months it knows your business better than any new hire. Leaving us means firing your best employee.

2

We improve every day

Our digital employees improve EmAGI every day, so we move faster than any team of only people.

3

Works with any modern AI model

We do not depend on one AI company. Every new model makes them smarter.

An assistant serves one person. EmAGI gives a company an employee.

	AI ASSISTANTS: CLAUDE COWORK, OPENAI DOTS	EMAGI
Models and services	Models of one AI company	Claude or GPT and AI model aggregators: picks the best model for the task. Connects any service, writes the missing ones itself.
Who it works for	One person: their tasks, their account	The whole company: team, clients and partners talk to one employee, dozens of tasks in parallel.
Memory	Cowork: only inside one project. Dots: you cannot view or correct it	Remembers the company's people, decisions and rules. The owner sees and edits its memory.
Workplace	A computer in the vendor's cloud; Cowork gets a new one for each session	Its own permanent server: installs any programs, runs the company's sites and services. Data can live with the company.
Where it works	In the vendor's apps; it cannot call you itself	Any messenger, email, social networks, voice and calls to regular phone numbers.

Higgsfield did not invent video models. It put the best ones into one product. We do the same for work.

Our customers are already here.

Every day, companies post **hundreds of thousands of jobs.** They are looking for people.

JOB POST

Looking for a person

→

A BETTER CHOICE

A digital employee, ready to start today

$350,000

first round · SAFE

BUT MORE THAN MONEY

We need a partner

who opens new markets and introduces us to the right people.

MOST OF IT

Marketing

SECOND

Tokens

what our employees eat: more tokens, more digital employees

THIRD

Legal

setting up the company

> **A little goes to people, only where an agent cannot go yet: meeting decision makers in person, face to face.**
>
> Writing, calling, everything else: our digital employees already do.

Thank you to my right hand, **Aurora,** for preparing this presentation.

Thank you for your time.
